JBL[®] STUDIO 2 SERIES

loudspeakers

THANK YOU FOR CHOOSING THIS JBL® PRODUCT

For more than 67 years, JBL® engineers have been involved in every aspect of music and film recording and reproduction, from live performances to the recordings you play on-the-go and in your home, car or office.

We're confident that the JBL system you have chosen will provide every note of enjoyment you expect – and that when you think about purchasing additional audio equipment, you will once again choose JBL products.

INCLUDED ITEMS

Each box contains one or two loudspeakers, depending on the model, as indicated below.

Studio 290

One Studio 290 speaker

Studio 280

One Studio 280 speaker

Studio 270

One Studio 270 speaker

Studio 230

Two Studio 230 speakers

Studio 210

Two Studio 210 speakers

Studio 220

Two Studio 220 speakers

Studio 235C

One Studio 235C speaker

Card with adhesive rubber feet
(Studio 230/220/210 – two cards,
Studio 235/225C – only one card)

Studio 225C

One Studio 225C speaker

Carpet Spikes
(Studio 290/280/270)

PLACEMENT

STUDIO 290/280/270/230/220 – LEFT AND RIGHT CHANNELS

For best results, place the speakers 6 – 10 feet (1.8m – 3m) apart. Angling the speakers toward the listening position can improve the stereo imaging. The speakers will produce the most accurate stereo soundstage when the angle between the listener and the speakers is between 40 and 60 degrees.

Generally, bass output will increase as the speaker is moved closer to a wall or corner.

For best performance, we recommend that you place the speakers at least 20 inches (51cm) away from the side walls.

- Position Studio 230/220/210 shelf speakers so that their tweeters are approximately at ear level. Peel the adhesive rubber feet from the card and apply them to the bottoms of the speakers.

Studio 235C / Studio 225C

You should place the center speaker directly above or below the center of your TV screen. The speaker should be no more than 2 feet (61cm) above or below the tweeters of the front left and front right speakers. If your TV set is deep enough, you can set the center speaker on top of the TV, with the speaker's front edge even with the TV's front edge.

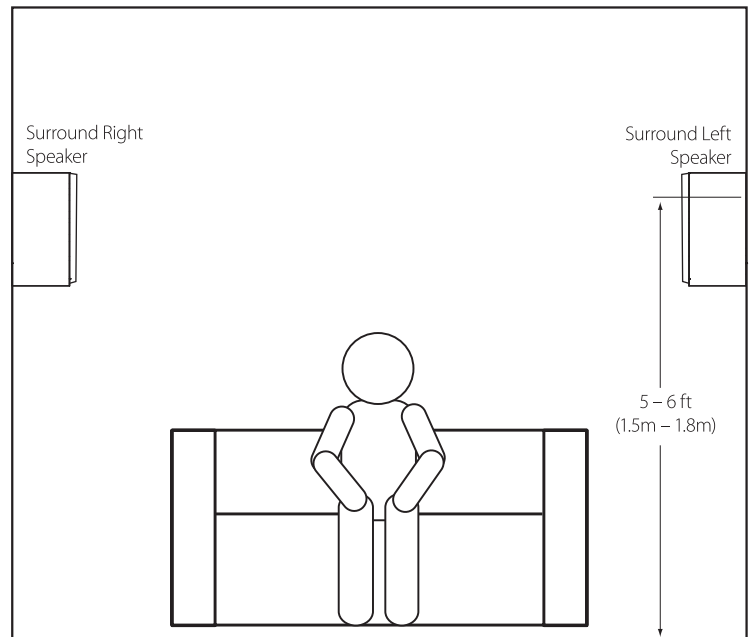

- Peel the adhesive rubber feet from the card and apply them to the bottom of the center channel speaker.

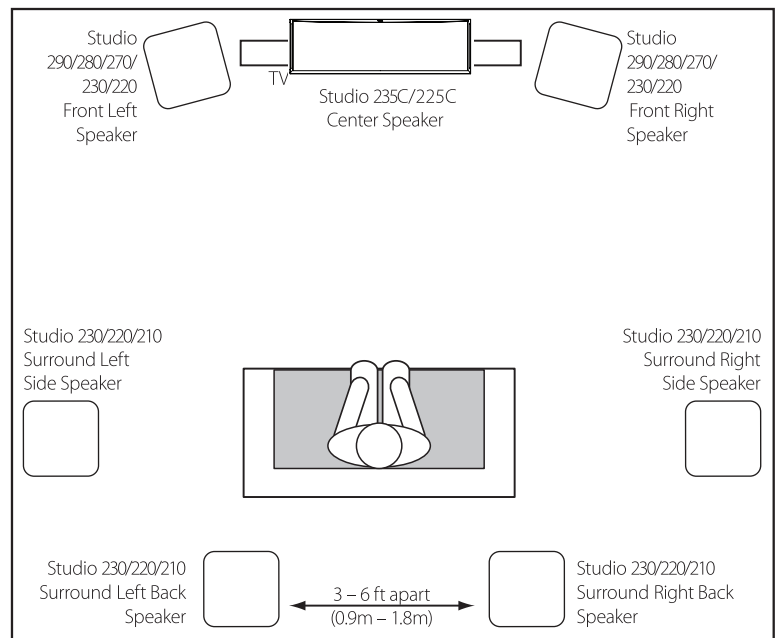

STUDIO 230/220/210 – SURROUND CHANNELS (5.1-CHANNEL SYSTEM)

When you use these speakers as surround-channel speakers in a 5.1-channel system, place them slightly behind the listening position, facing each other. Ideally, they should be 5 – 6 feet (1.5m – 1.8m) above the floor. An alternate location would be on a wall behind the listening position, facing forward. The surround speakers should not call attention to themselves while they're playing. Experiment with their placement until you hear a diffuse, ambient sound accompanying the sounds that you hear from the front left, front right and center speakers.

STUDIO 230/220/210 – SURROUND CHANNELS (7.1-CHANNEL SYSTEM)

When you use these speakers as surround-channel speakers in a 7.1-channel system, place the surround side speakers directly to the sides of the listening position, at least 5 – 6 feet (1.5m – 1.8m) above the floor. Place the surround back speakers on the wall behind the listening position, also at least 5 – 6 feet (1.5m – 1.8m) above the floor and 3 – 6 feet (0.9m – 1.8m) apart.

CONNECTIONS

CAUTION: Make sure that all of the system's electrical components are turned OFF (and preferably unplugged from their AC outlets) before making any connections.

Speakers and amplifiers have corresponding positive and negative (“+” and “-”) connection terminals. All Studio 2 series speakers have connection terminals that are marked “+” and “-” on the terminal-cup assembly. Additionally, the “+” terminals have red markings, while the “-” terminals have black markings.

To ensure proper polarity, connect each “+” terminal on the back of the amplifier or receiver to the respective “+” (red) terminal on each speaker. Connect the “-” terminals in a similar way. Do not reverse polarities (i.e., “+” to “-” or “-” to “+”) when making connections. Doing so will cause poor stereo imaging and diminished bass performance.

IMPORTANT: Make sure the (+) and (-) wires or connectors do not touch each other or the other terminal. Touching wires can cause a short circuit that can damage your receiver or amplifier.

BASIC SINGLE-WIRE CONNECTION

Connect the amplifier to each speaker as shown in the illustration below.

BI-WIRE CONNECTION

For the Studio 290/280/270 speakers, you can use either set of terminals on the connector panel.

IMPORTANT: Do not remove the metal jumpers from between the two sets of terminals when connecting the speaker wires.

Studio 230/220/210/235C/225C

Studio 290/280/270

BI-WIRE CONNECTION (STUDIO 290/280/270)

The Studio 290/280/270 connection assemblies have two sets of input terminals that are connected by metal jumper bars. The upper set of terminals is for the midrange/tweeter, and the lower set of terminals is for the woofer(s). This arrangement allows you to bi-wire the speakers using a single stereo amplifier or using two stereo amplifiers. Bi-wiring can offer sonic advantages and more flexibility in power-amplifier selection over a conventional single-wire connection.

Before bi-wiring the speakers, remove the jumper bars.

SINGLE-AMPLIFIER BI-WIRING

DUAL-AMPLIFIER BI-WIRING

For more information about various speaker-wire and connection options, contact your local JBL dealer.

CARING FOR YOUR SPEAKERS

- Special care must be used with the gloss portion of the cabinet. Gently use a dry microfiber cloth to dust or remove fingerprints from this surface. Do not place objects on top of the speaker.
- Wipe the cabinet with a clean, dry cloth to remove dust. Damp cloths may dull the cabinet finish. Do not use volatile liquids such as benzene, paint thinner or alcohol on the cabinet.
- Do not spray chemicals near the cabinet.
- To remove dust from the grille fabric, use a vacuum cleaner set to “low” suction.
- Do not wash the grilles in water, as it may fade the color or make them uneven.
- If the surfaces of the woofer and midrange cones become dusty, you can carefully sweep them clean with a soft, dry calligraphy brush or paint brush. Do not use a damp cloth.
- NEVER touch the tweeter dome or put anything against it.
