

WA-3

WIRELESS SUBWOOFER KIT

Klipsch®

AVAILABLE AT
DIGITAL CINEMA

A COMPLETE SOLUTION

The WA-3 Wireless Subwoofer Kit comes with everything you need to wirelessly send bass and/or low frequency effects information from your home theater receiver/processor or stereo receiver* to a compatible Klipsch Group, Inc. (KGI) subwoofer equipped with an internal wireless receiver.

Current KGI subwoofers with wireless receiver built-in include: Klipsch C-380ASWi and C-310ASWi

NO MORE LONG, BULKY SUBWOOFER CABLES

The WA-3 Wireless Subwoofer Kit makes adding a subwoofer to a new or existing speaker system much easier. It replaces the need for a long, thick, costly subwoofer cable that traditionally must be connected between a receiver or processor and a subwoofer.

IT ALLOWS FOR BEST SUBWOOFER PLACEMENT

Easily place the subwoofer where it both sounds and looks best in the room since you're not restricted by a speaker cable.

2.4 GHZ OPERATION WITH DYNAMIC CHANNEL SELECTION

The wireless signal transmits flawlessly within a 50' (15m) radius using an advanced automatic channel selection technology. Even if you have a wireless network or wireless phone system, the WA-3 Wireless Subwoofer Kit does not interfere with, nor has interference from, any other wireless systems in your home.

CONNECT UP TO THREE SUBWOOFER

Up to three subwoofers can be used simultaneously when paired with a single transmitter.

*Stereo receiver must have line level outputs for right and left channels to attach to the WA-3 transmitter.

SPECIFICATIONS
