**AVAILABLE AT
DIGITAL CINEMA**

The all-new ultra compact Silo speaker from Wharfedale condenses over 80 years of hi-fi manufacturing experience into an all new wireless speaker that sounds as good at it looks. With up to 5 hours battery life on one charge, it makes a perfect companion for use by the pool, on the road, in the park and literally anywhere where power sockets are not immediately available. Equipped for all modern audio devices, Silo offers a multiple of connection methods including USB, 3.5mm jack line in and Bluetooth.

 40W

Wharfedale SILO

From a compact and lightweight form, the Silo produces a heavyweight sound. This is delivered via 2 x 2.75" full range drivers and a 1" silk dome tweeter which span a range of 60Hz – 20kHz frequency response. The combined drivers deliver 40W RMS of power substantial enough even for outdoor use.

Utilising the latest in Bluetooth technology you can enjoy all your music streamed from your mobile or tablet device. As well as conventionally pairing your device via the Bluetooth settings, Silo is equipped with NFC so users can enjoy a hassle free setup by placing the device on top of the NFC logo. Silo also works as a power bank, so if your mobile or tablet devices are running low on battery, just plug them in via USB and keep enjoying the music.

Once connected, the operation of Silo is simple and intuitive. The wireless speaker works within a distance of 10m when connecting via Bluetooth, so you may choose to either operate it via the onboard controls or directly from your device. The speaker itself has all the controls you need, even controls to answer calls via mobile phones. A hands-free mode enables control from your tablet device if you are further away.

Similarly to all Wharfedale hi-fi equipment, our quality in finish and materials are key in making a long-lasting product. The speaker is wrapped in a rugged aluminium grille with a rubberised endings for a hard-wearing speaker you can take with you anywhere.
